SOFIA Fashionwear Website

Language Used: HTML, CSS, JavaScript, SQL and PHP with Bootstrap Framework.

Setup

- Run XAMPP
- Create database (name 'sofiadb')
- Click Import
- Import `sofiadb.sql`. (`sofiadb` is located in this folder)
- Move `SOFIA` file to your 'xampp/htdocs'.
- Access the website. (the main page is 'SOFIA/index.php')

Homepage

- Home page – 3 images slides
- About us – About the company and Social media accounts. (I used `Lorem Ipsum` as a temporary text)

Admin

- Login to admin (Path: 'SOFIA/adminlogin.php')
- Username and password is `admin` (You can change it via phpmyadmin, much better if there's only one account.)
- Dashboard – Main Page of Admin Site you can monitor you Total Sales, Total Users, Total Products, Total Pending Orders, Total Successfully Delivered Products, and Total Cancelled Orders.
- Products – You can search existing products, add new products, update a product information's, delete a product, and add stocks.
- Orders – You can monitor Order Status here, and update its status if it is already delivered or you're cancelling the order.
- Users – You can search user's information, update user and delete.

Users

- The website will force you to login so if you don't have an account you can just signup.
- My Store – Users can Search Products, add to cart a product and check its ratings. It also has a filter for better searching of items.
- My Order – Users can view their past orders here. They can also Cancel an Order or Rate a Product after it has been received.
- Leaderboards – This page shows the 20 best miners on the website according to the number of products they have purchased. If the user belongs to the ranking they will receive an additional one-week expiration of their reserved item.
- Cart – User can check their cart. All product stocks in their cart are reserved for them, if the reservation expired, it will be deleted automatically. (Unless they belong to the Top 20 Miners they will have additional one-week reservation)

Explore the website to learn more about its features.

Target Features and Its Path:

Target Features	Path
Product Page	'sofia/order.php'
Filtering Option	'sofia/order.php' (beside searchbar)
